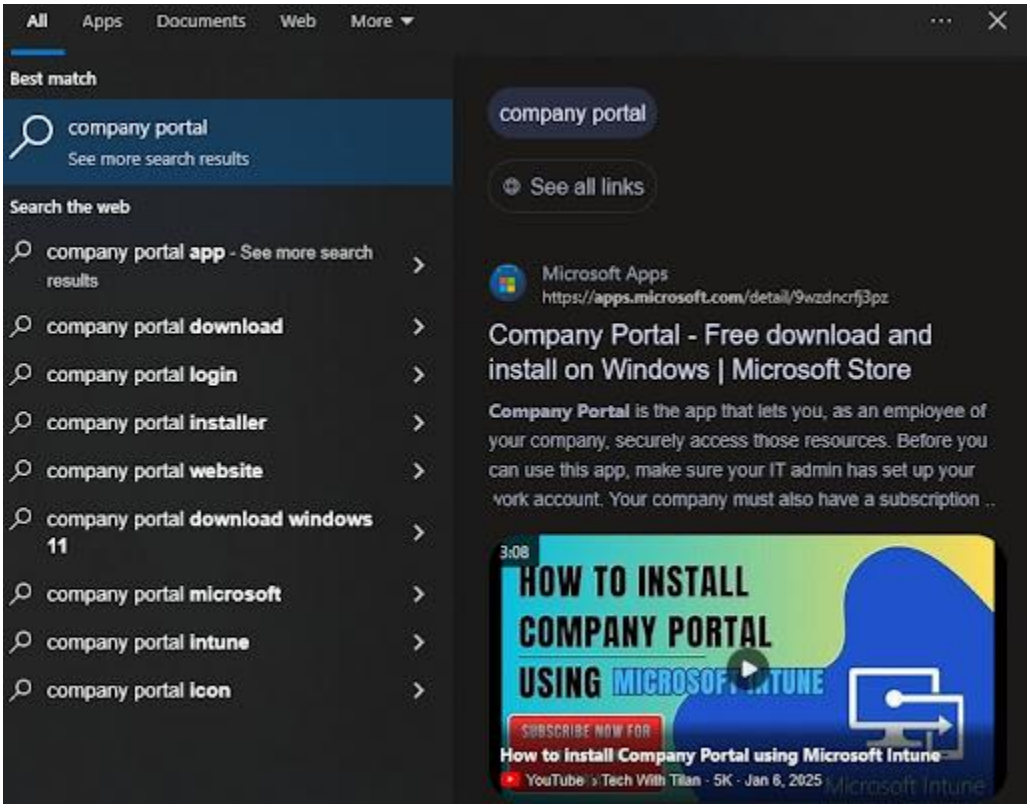
SOP 06: Device Compliance & Security Audit

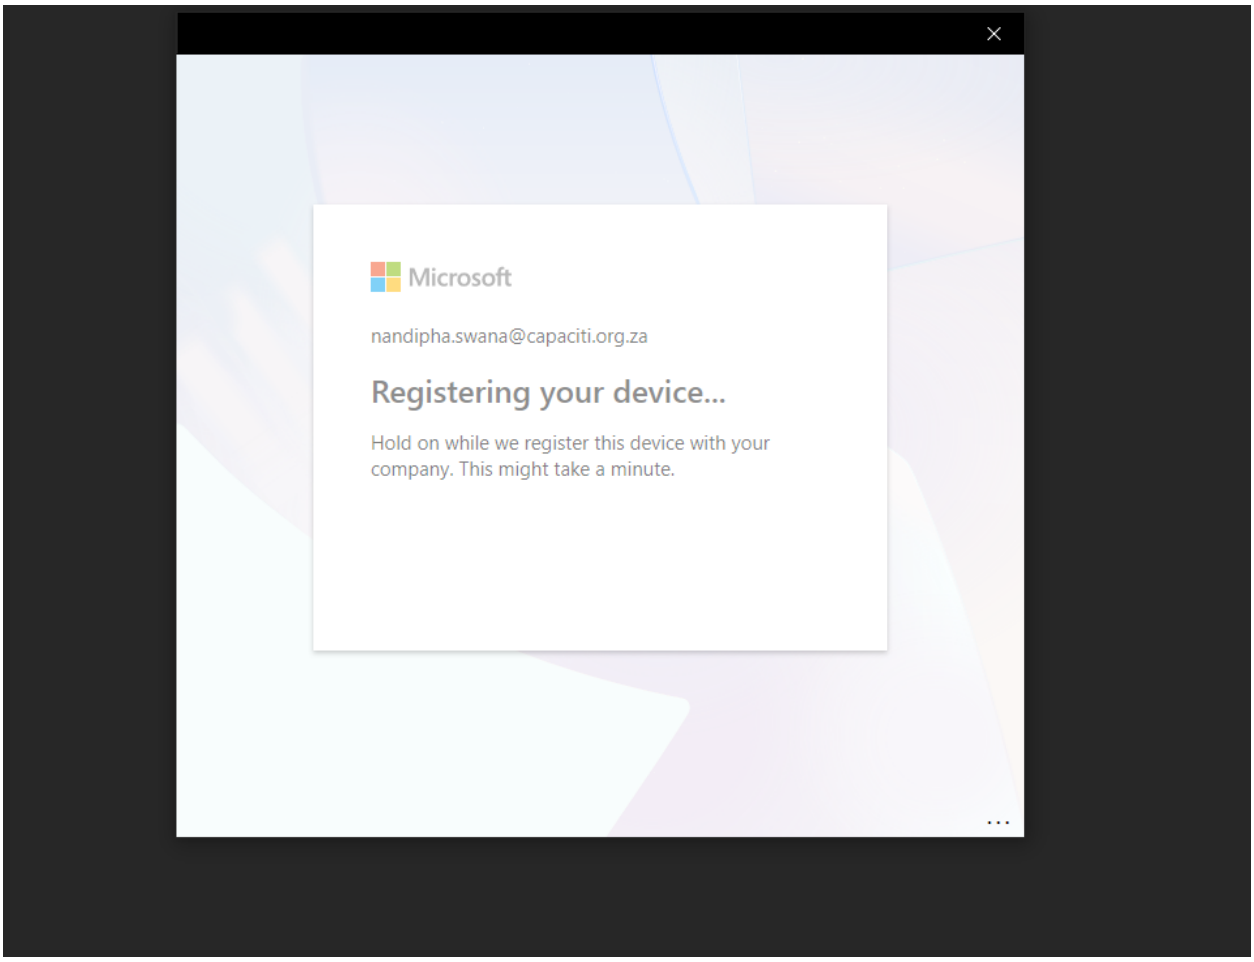
Step 1: Open the Company Portal App

Start by searching for the Company Portal app in your Windows search bar.



Step 2: Sign In and Device Registration

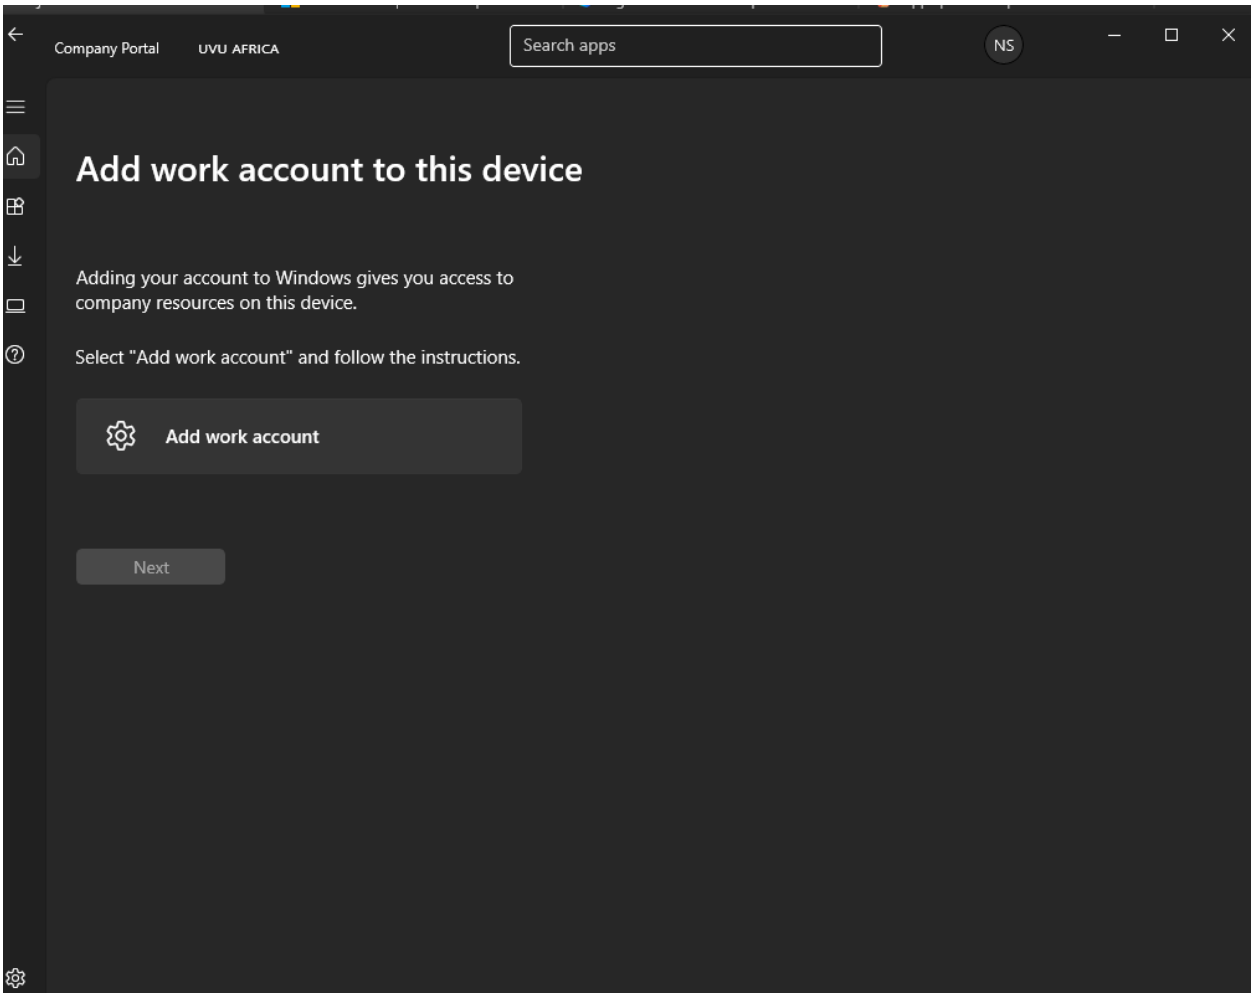
Launch the app and sign in with your work email (nandipha.swana@capaciti.org.za). You will see a screen indicating that the system is registering your device with the company.



Step 3: Troubleshooting Connection Issues

If you see an error message stating "Device management could not be enabled", follow these sub-steps to fix it:

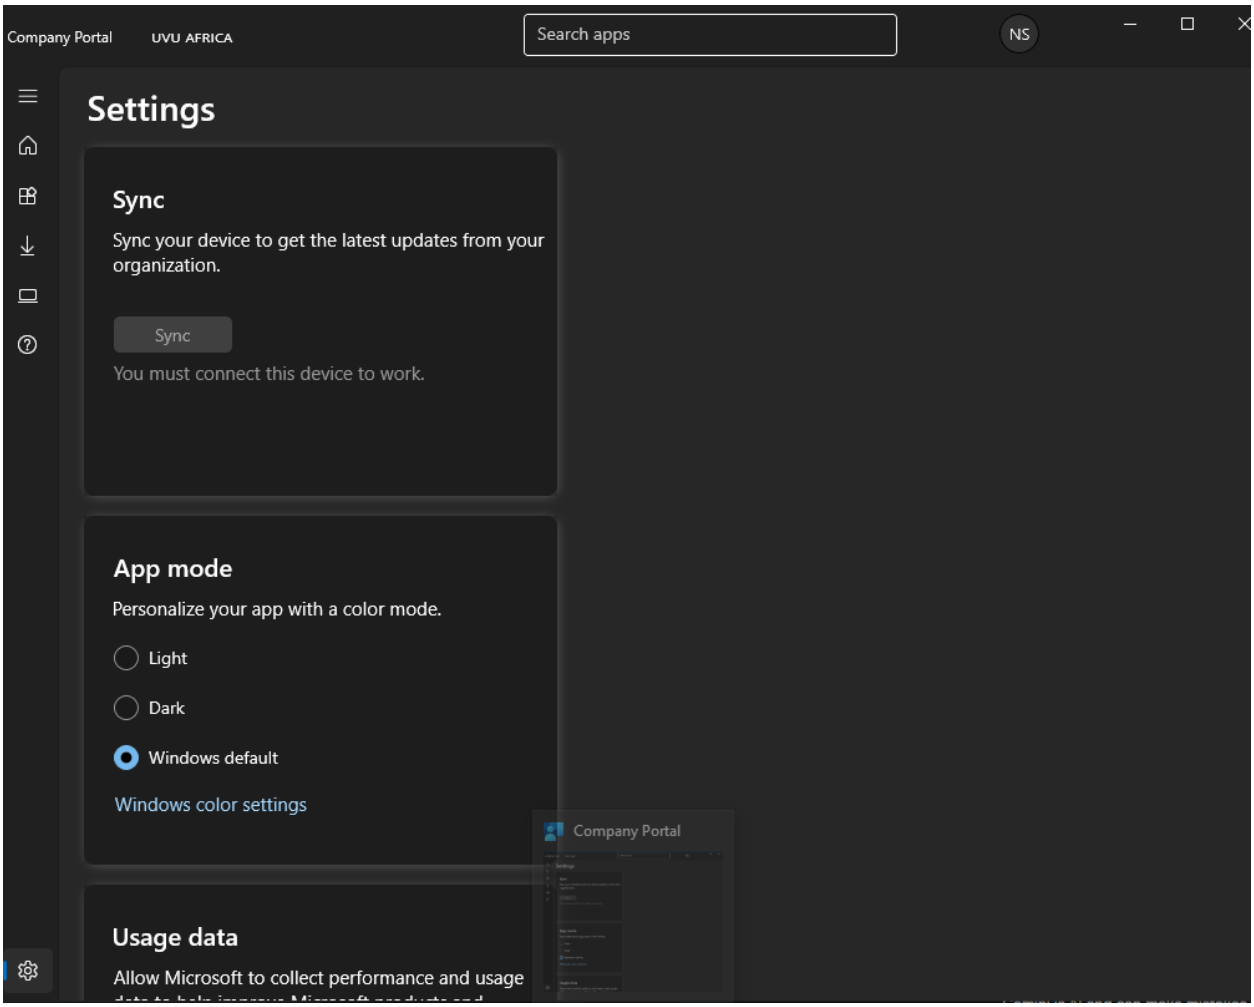
- Click OK on the error window.
- Select the option to "Add work account" to manually link your device to the organization.
- When the system confirms it has found your account, click Next.



Step 4: Manual Compliance Sync

To verify that security features like BitLocker are active and recognized, go to the Settings menu.

- Locate the Sync button and click it to refresh your device's status with the company servers.
- Wait for the sync to finish. The "Sync" screen will update to show you are connected to work.



Project Final Proof: IT Support Assistant

To conclude your project documentation, add a section showing your Intelligent System in action.

- Knowledge Base: Include a screenshot of your knowledge tab in Copilot Studio showing your 6 PDFs uploaded.
- Functional Test: Show the "Test your agent" pane where the bot is successfully answering a technical question.
